## Keynote lecture

## Special session

***“How should we harmonize the safety education with diversity in research site”***

The diversity of the research site is not limited to the complexity and sophistication of the research and the interdisciplinarity of the research field, but also includes the internationalization / gender of the members, the differences in the cultural background, and the types of equipment and chemicals used in the experiment. Though these issues likely depend on individual circumstances, they are still common issues in every country, and it is expected that the safety education methods that are effective at each site will also have high commonality. In this session, we will introduce the current situation of diverse research sites and various advanced initiatives of safety management and education based on diversity, and will discuss the importance of harmonization for sharing and cooperating on an innovative way of safety management and education methods.
